*Regarding the security vulnerability in the Java logging library
Apache Log4j version 2.0 – 2.14.1.*

3SI has confirmed that our 3SI Tracking and SafeBanker/
SafeResource Applications do not utilize the Log4j library and
therefore are not affected.

One adjacent, non-service delivery application was identified
as running version 2.14 and was upgraded immediately to the
non-vulnerable versions and is now running 2.17. We will
continue to monitor and address any issues.

3SI considers information security and protecting our systems
from cyber vulnerabilities as a critical priority. We will
continue to provide updates with any new information.

For more information, contact 3SI at info@3si.com
